GNANI.AI INTERNSHIP · SOLUTION PITCH

Dukaan Saathi दुकान साथी

A **Hinglish voice ledger** for kirana shops. The shopkeeper speaks; stock, the udhaar khata and the day's numbers update themselves.

THE PROBLEM

A kirana counter runs on memory and a notebook. The owner already knows the entry they want to make; the friction is the notebook, the app form, and the ten taps between remembering and recording. Voice assistants answer questions, but they do not safely change a shop ledger.

THE SOLUTION

One sentence in. One ledger movement out.

Dukaan Saathi treats a spoken sentence as a ledger movement, not a chat message.

> "Aaj 20 kilo chawal aaya aur 5 kilo sugar."
> → **Two stock-ins** and one receipt, from one breath.

> "Ramesh ko 2 kilo chawal udhaar diya."
> → Stock **−2 kg** · Ramesh's khata **+₹120**.

> "Aaj kitni sale hui?"
> → **Computed** from today's bills. Never an invented number.

Ambiguous writes ask one precise question. Stock shortfalls and fuzzy ASR repairs need a "haan". Every write can be reversed with "undo karo".

WHAT MAKES IT DIFFERENT

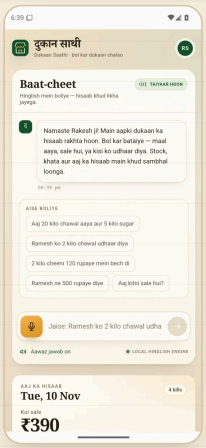

- **Hinglish in, ledger out.** Built for the counter, not the office.
- **Offline-first.** The phone caches the shop and queues fully specified writes with an **opId**; the server replays them idempotently. Wi-Fi loss never stops a sale.
- **One thumb.** A native Android app with a home-screen mic widget that opens straight into listening.

GNANI INSIDE

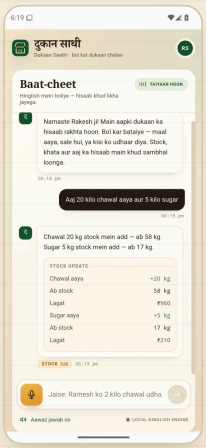

Prisma	Hinglish speech → text, with the shop's items and customers as keyterms. **Live-tested.**
Timbre	Spoken confirmations and summaries in the Poorvi Hinglish voice. **Live-tested.**
Evon	Endpoint-driven intent seam behind **GNANI_EVON_URL**; a deterministic local engine is the always-on fallback.

Verified round trip: Timbre audio of "Aaj bees kilo chawal aaya aur paanch kilo sugar" → Prisma आज 20 किलो चावल आया और 5 किलो sugar। → two stock entries.

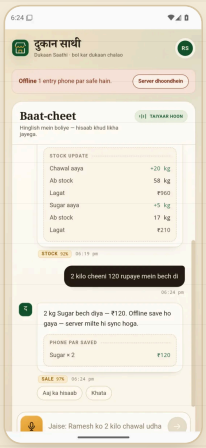

IN THE APP

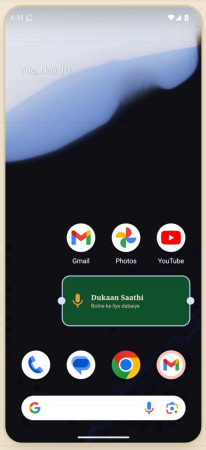

Baat-cheet
Hinglish conversation with suggested commands.

Voice entry
One sentence becomes stock and cost movements.

Offline ledger
A sale is saved locally and queued for replay.

Home widget
Tap once and the shop is listening.

24/24 tests passing, including offline replay and idempotency	**82s** end-to-end demo, six beats, phone and server	**6/6** beats exercised on an Android 15 emulator	**5.4 MB** APK in the v0.1.0 release; works with no API key
